Chapter 4

Skip Counting and Multiplication

Points to remember:

- 1. Multiplication is called repeated addition.
- 2. $\underline{\mathbf{x}}$ (**cross**) is the symbol of multiplication.
- 3. When we multiply two numbers the result is called **product**.
- 4. Two numbers can be multiplied in any order and their answer remains the **same**. Example 5x4=20; 4x5=20
- 5. When we multiply zero (0) to any number, we always get <u>zero</u> in answer. Example $2 \times 0 = 0$; $0 \times 4 = 0$
- 6. When any number is multiplied by 1 then the product or answer is always the **number itself**. Example 5 x 1 =5; 1 x 6 = 6
