## CHAPTER-4 SUBTRACTION. <br> PROPERTIES OF SUBTRACTION: -

(1) When we subtract zero from a number, the difference is the number itself.
$E x-940-0=940,155-0=155,690-0=690$
(2) When we subtract a number from the number itself the difference is zero.
$450-450=0,566-566=0,789-789=0$
(3) when 1 is subtracted from a number, the difference is the predecessor or before of the number.

423-1=422, 560-1=559, 789-1=788 POINTS TO REMEMBER.
(1)Subtraction means to take away.
(2) Sign of subtraction is ' - ' minus.
(3) We always subtract smaller number from a big number.
(4) The number that is subtracted is called subtrahend. ( 25 - $\mathbf{1 0 = 1 5 )}$

# 25 is Minuend, 10 is Subtrahend and 15 is Difference 

(5) The number which we subtract is called minuend.
(6) The answer of subtraction is called difference.
(7) While subtracting, always write the larger number on top.
(8)We can check subtraction by suitable addition.
(9)Subtrahend + Difference $=$ Minuend.
(10)1Ten = 10 Ones
(11) 1 Hundred= 10 Tens
(12)1 Thousand =10 Hundreds

*     *         *             *                 *                     *                         *                             *                                 *                                     *                                         *                                             *                                                 *                                                     *                                                         *                                                             *                                                                 *                                                                     *                                                                         *                                                                             *                                                                                 *                                                                                     *                                                                                         *                                                                                             *                                                                                                 *                                                                                                     *                                                                                                         *                                                                                                             *                                                                                                                 *                                                                                                                     *                                                                                                                         *                                                                                                                             *                                                                                                                                 *                                                                                                                                     *                                                                                                                                         *                                                                                                                                             *                                                                                                                                                 *
