

## CHAPTER- 2

### TYPES OF COMPUTERS

#### A. Tick the correct answer:-

1. Computer is available in various :  
(i) sizes      (ii) shapes      (iii) weights      (iv) **all**
2. Which computer works on the principle of analogous data?  
(i) Digital Computer      (ii) **Analog Computer**      (iii) Mini Computer      (iv) Micro Computer
3. Which of the following is a digital computer?  
(i) Thermometer      (ii) Voltmeter      (iii) **Digital watch**      (iv) All
4. Which is the most powerful computer?  
(i) Mainframe computer      (ii) Mini computer      (iii) **Super computer**      (iv) Micro computer
5. Where are supercomputers used?  
**(i) Weather forecasting**      (ii) Shopping malls      (iii) Homes      (iv) Schools
6. Which of the following are multi-user computers?  
(i) Mainframe computer      (ii) Mini computer      (iii) **Both (i) & (ii)**      (iv) None
7. Which computers is called as Workstation?  
(i) Micro computer      (ii) Analog computer      (iii) Personal computer      (iv) **Mini computer**
8. Where are micro computers used?  
(i) Schools      (ii) Homes      (iii) Offices      (iv) **All**
9. Which is a portable computer?  
(i) **Notebook computer**      (ii) Desktop computer      (iii) **Palmtop computer**      (iv) None
10. All the devices of desktop computer are arranged on a:  
(i) chair      (ii) cupboard      (iii) **desk**      (iv) floor

## **B. Give one word for the following.**

1. Fast calculating device: [Computer](#)
2. Used for computational purpose: [Analog Computer](#)
3. Computer as big as the size of a room: [Super Computer](#)
4. They are less powerful than super computers: [Mainframe Computer](#)
5. Also known as Workstation: [Mini Computer](#)
6. Also known as Personal Computer: [Micro Computer](#)
7. Computer that fits on a desk: [Desktop Computer](#)
8. Computer that fits in your hand: [Palmtop computer](#)

## **C. Answer the following questions :**

1. What is an Analog computer?

**Ans.** Analog computer works on the principle of analogous data. Examples - Thermometer, Voltmeter, Speedometer etc.

2. Which data is processed by digital computers?

**Ans.** Digital computer works with binary number. Numeric and non-numeric data can be processed by such computers.

3. Where are super computers used?

**Ans.** They are used in weather forecasting, military simulation, space research, etc.

4. What is a mainframe computer?

**Ans.** Mainframe Computers are large and powerful computers. They are less powerful than super computers.

5. Write any two uses of computers.

**Ans.** (a) Used for weather forecasting, space research etc.

(b) Used in shops and malls to make bills.

**D. Write one feature of the following.**

**1. Super computer :** They are the most powerful computers in the world.

**2. Mini computer :** They are multi-user computers and are also called workstation.

**3. Personal computer :** They are small in size and suitable for single person use.

**E. Complete the table with difference points for each:**

**1. Desktop computer :** (i) The desktop computer is kept on a desk.

(ii) These computers are widely used in schools, offices, home etc.

**2. Notebook computer :** (i) It is small, lightweight and portable computer.

(ii) It has built-in keyboard, mouse, monitor and camera.

**2. Notebook computer :** (i) It is small, lightweight and fits in our hand.

(ii) It is very easy to carry them from one place to another.
