E. Answer the following:

1. What is the use of Windows Movie Maker software?

Ans

Uses of Windows Movie Maker Software

1. With Windows Movie Maker, we can create movies from your photos and videos, whether they are already on your computer or still in your camera.
2. We can make movies on various occasions, like birthday parties and family gatherings by using Windows Movie Maker.
3. We can Share your movies on social networking sites, such as Facebook and YouTube, or upload them to OneDrive.

2. Differentiate between Title and Caption.

Page No: 26

Titles are added to the beginning of the selected clip, while credits are added at the end of the entire project. Captions can be added as text to an individual clip to provide relevant information.

3. Write down the steps to insert any media in your project.

- ▶ Click on the **Add videos and photos** button present on the **Home** tab in the **Add** group.
- ▶ The **Add Videos and Photos** dialog box will appear as shown in Figure 2.4.
- ▶ Choose **Videos** category from the **Libraries** folder and select the **Sample Videos** that you require. Click on the **Open** button. The selected **video** will appear in the **Storyboard**. Or

4. Explain the importance of the Trim tool.

We Can reduce the duration of a video clip with the help of Trim tool

5. What is transition effect? How is it useful in making a movie?

Transitions are applied to add visual effects to the movie. They are used to add connectivity to the consecutive scenes of a movie. Transitions can be added between two images, video clips, or titles. The effects range from simple fades to complicated graphical animations. To apply transitions follow these steps:

6. How can you export a movie?

- ▶ Click on the **Home** tab and select the **Save movie** button present in the **Share** group.
- ▶ The **Save Movie** dialog box will appear. Write the name, **Final Movie** in the File name box. Click on the **Save** button.
- ▶ The **Movie Maker** processing bar will appear on the screen, which will display the progress of the export process.

7. Differentiate between Fade in and Fade out effect.

You can use **Fade In**  option to gradually increase the volume of audio in the beginning and **Fade out**  to gradually decrease it in the end.
