

Class 8<sup>th</sup>

Chapter – 2

Geography

Land, Soil, Water, Natural Vegetation and Wildlife

**1. Answer the following questions.**

(i) Which are the two main climatic factors responsible for soil formation?

Answer: Two main climatic factors responsible for soil formation are Temperature and Rainfall, wherein rainfall influences the rate of weathering and humus formation.

(ii) Write any two reasons for land degradation today.

Answer: The overuse of chemical fertilizers and deforestation are the two main reasons for land degradation. The growing population and their ever-growing demand has led to large scale destruction of forest cover and arable land and has created a fear of losing this natural resource.

(iii) Why is land considered an important resource?

Answer: Land is considered an important resource because it can be put to use for various purposes like agriculture, forestry, mining, building houses, roads and setting up of industries.

(iv) Name any two steps that the government has taken to conserve plants and animals.

Answer: Two major steps taken by Government to protect and conserve plants, animals and natural vegetation are:

National parks, wildlife sanctuaries, biosphere reserves are made to protect our natural vegetation and wildlife.

Awareness programmes like social forestry and tree plantation- 'Vanamahotsava' are organised to conserve forests, which are a valuable natural resource.

(v) Suggest three ways to conserve water.

Answer: Three main ways to conserve water are:

- a. Increasing forest cover and other vegetation to slow the surface runoff
- b. Replenishing underground water through rainwater harvesting
- c. Reducing the loss of water in irrigation and shifting to less water-intensive methods of agriculture

**2. Tick the correct answer.**

(i) Which one of the following is NOT a factor of soil formation?

- (a) Time
- (b) Soil texture
- (c) Organic matter

Answer: b. Soil Texture

(ii) Which one of the following methods is most appropriate to check soil erosion on steep slopes?

- (a) Shelterbelts

- (b) Mulching
- (c) Terrace cultivation

Answer: c Terrace cultivation

(iii) Which one of the following is NOT in favour of the conservation of nature?

- (a) switch off the bulb when not in use
- (b) close the tap immediately after using
- (c) dispose poly packs after shopping

Answer: c Dispose poly packs after shopping

**3. Match the following**

Column A	Column B
Land use	prevent soil erosion
Humus	narrow zone of contact between the lithosphere, hydrosphere and atmosphere
Rock Dams	productive use of land
Biosphere	organic matter deposited on top soil
	contour ploughing

Answer:

Column A	Column B
Land use	productive use of land
Humus	organic matter deposited on top soil
Rock Dams	prevent soil erosion
Biosphere	narrow zone of contact between the lithosphere, hydrosphere and atmosphere

**4: State whether the given statement is true or false. If true, give the reasons.**

(i). Ganga–Brahmaputra plain of India is an overpopulated region.

True: River valley and plains offer suitable land for agriculture. Hence, they are densely populated.

(ii) Water availability per person in India is declining.

True: Increasing population, increasing urbanization, the rising standards of living and the rising demands for food and cash crops are leading to shortages in the supply of freshwater. The shortages are either due to drying up of water sources or water pollution.

(iii) Rows of trees planted in the coastal areas to check the wind movement are called intercropping.

False: Rows of trees are planted to check the wind movement and protect soil cover. These are called as shelterbelts.

(iv). Human interference and changes of climate can maintain the ecosystem.

False: Climate change and human interferences can cause the loss of natural habitats, and hence destroy the ecosystem.

## 5 : Very Short Questions

1. What are the possible reasons behind the uneven distribution of population around the world?

Answer.

The reasons behind uneven population distribution are mainly the varied conditions of land and climate.

2. Give three common forms of land use.

Answer.

Three common land use forms are: (i) As cropland, (ii) Pasture, (iii) Forests.

3. What human factors determine land use pattern?

Answer.

Human factors affecting land use pattern are population and technology.

4. Define soil.

Answer.

The thin layer of grainy substance covering the surface of the earth is called soil.

5. What is required to make soil fertile?

Answer.

The right mix of minerals and organic matter is needed to make soil fertile.

6. What is parent rock?

Answer.

The rock from which soil is derived is called parent rock.

7. What are the factors threatening soil as a resource?

Answer.

Two factors that threaten soil as a resource are soil erosion and its depletion.

8. What method of soil conservation may be used in coastal and dry regions?

Answer.

Shelter belts are used to protect the soil in coastal and dry regions.

9. Why is the earth called the “water planet”?

Answer.

The earth’s surface has about three- fourths water, so it is called “water planet”.

10. In what forms is fresh water found on the earth?

Answer.

Fresh water is found in the forms of groundwater, water in rivers and lakes, and water vapour.

11 . What is the name given to the process involved in rain formation?

Answer.

The process involved in the formation of rain is called “water cycle”.

12. Name some regions of water scarcity in the world.

Answer.

Africa, West Asia, South Asia, parts of western USA, northwest Mexico, parts of South America, and Australia face water scarcity.

13. Name a method to save surface run-off.

Answer.

Water harvesting is a method to save surface run-off.

14. How is a bird like vulture important for the ecosystem?

Answer.

A vulture feeds on dead livestock and so it cleanses the environment.

15. What is the distinguishing feature between evergreen and deciduous forests?

Answer.

Evergreen forests never shed their leaves whereas deciduous forests shed their leaves once a year.

16. What is the Vanamahotsava?

Answer.

The social programme of planting trees, organized at the community level is called vanamahotsava.
