

Question 7.

If wheat is sown in the kharif season, what would happen? Discuss.

Answer:

Wheat crop is sown from November/December to March/April. It is grown in winter and requires less water. If wheat is sown in Kharif season, its production will be decreased Question 8.

Explain how soil gets affected by the continuous plantation of crops in a field.

Answer:

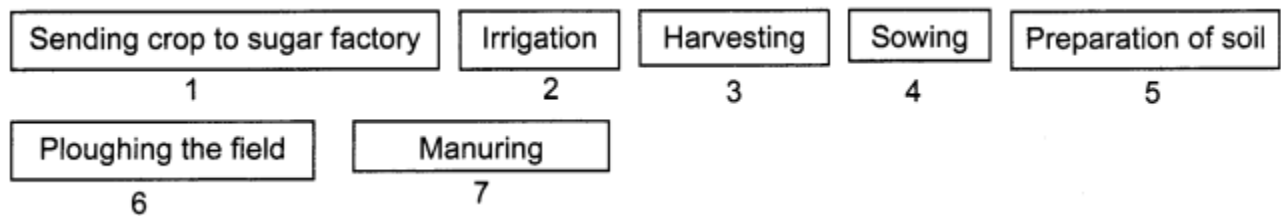

Continuous plantation of crops makes the soil poorer in certain nutrients as the crops take up nutrients from the soil. The soil becomes infertile. It does not get enough time to replenish the Question 9.

What are the weeds? How can we control them?

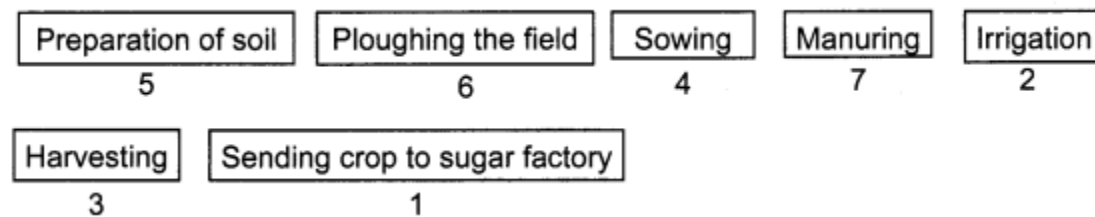

Answer:

The undesirable and unwanted plants which grow naturally along with the crop are called weeds. The growth of weeds can be controlled by adopting many ways. Tilling before sowing of crops helps in the uprooting and killing of weeds, which may then dry up and get mixed with the soil. Weeds are also controlled by using certain chemicals, called weedicides. Weedicides are Question 10.

Arrange the following boxes in the proper order to make a flow chart of sugarcane crop production.

Answer:

fields Question 11.

Complete the following word puzzle with the help of clues given below.

Down
